PROFESSIONAL SUMMARY

Mobile developer with 2+ years of experience delivering Android and iOS apps with Kotlin Multiplatform, Jetpack Compose and Flutter, together with the APIs and admin web tools behind them. Alongside my full-time role, main developer (freelance) of Nextturn, a multi-tenant UK driving-instructor marketplace with Stripe Connect payments, built across a Flutter app, a Node.js API and a Nuxt website. Owns features from database to screen, ships them safely behind feature flags, and brings a QA background that shows in thorough automated and release testing.

TECHNICAL SKILLS

Mobile: Kotlin, Kotlin Multiplatform, Compose Multiplatform, Jetpack Compose, Android SDK, Coroutines, Flow, Flutter, Dart, GetX, Firebase (FCM, Crashlytics), Location & Geofencing, Foreground Services

Architecture: Clean Architecture, MVI, MVVM, Multi-Module Gradle, SOLID, Repository Pattern, Koin, Hilt, Design Systems, Feature Flags

Backend & Web: Node.js, Express, MongoDB, Kotlin + Spring Boot 3, JWT, Flyway, REST API Design, Webhooks, Nuxt 3 / Vue, React, TypeScript

Networking & Payments: Ktor, Retrofit, Dio, kotlinx.serialization, Stripe Connect, Google Sign-In

Testing & QA: JUnit, Compose UI Test, Espresso, Flutter Integration Tests, Playwright E2E, Postman, Test Case Design, Regression & Smoke Testing

Tools: Git, GitHub, Android Studio, Xcode, ADB, Heroku, Vercel, Jira, Agile / Scrum, AI-Assisted Development (Claude Code)

PROFESSIONAL EXPERIENCE

Nextturn – Driving Instructor Marketplace (UK) 07/2026 – Present

Main Developer (Freelance) | Flutter, Node.js, Express, MongoDB, Nuxt 3, Stripe

- Led the conversion of a single-school production app into a multi-tenant marketplace where independent instructors and schools join under their own brand and learners find, book and pay for lessons.
- Wrote over 900 commits across the Flutter app, Nuxt website and Node.js API, covering instructor search (postcode, gearbox, price, rating), direct booking, wallet credit and lesson packages, messaging, reviews, gift cards, waitlist and iCal calendar sync.
- Integrated Stripe Connect for marketplace payments: instructor onboarding, split payments with a platform fee, webhooks and a double-charge guard, behind a provider-neutral interface that keeps the legacy gateway working alongside it.
- Designed the onboarding flow: email code verification, Google Sign-In, a 3-step instructor setup, and UK address lookup with a monthly cost cap.
- Hardened the platform for launch by fixing cross-tenant data access, adding login-attempt protection and content moderation, removing hard-coded secrets, and meeting App Store and Google Play requirements.
- Planned and ran full end-to-end test rounds (Playwright, Flutter integration tests, release builds on real devices) and managed deployments on Heroku and Vercel.

Folowise 06/2024 – Present

Mobile Application Developer (Android & Kotlin Multiplatform) | Amman, Jordan

- Develop and maintain client Android and iOS apps with Kotlin Multiplatform and Compose, owning features from requirements and API design through testing and release.
- Roll out new features as dark launches: behaviour ships behind default-off flags and is enabled on staging first, so bundled backend deploys reach production safely.
- Write unit, UI, integration and Playwright E2E tests; design test cases and run regression and smoke testing before every release.
- Mentor trainee Android developers through practice assignments, reference solutions and code review checklists.

Client project: Affinity IFS – Workforce Management Platform (03/2026 – 07/2026) | KMP, Compose Multiplatform, Spring Boot, React

- Built features in a 32-module Kotlin Multiplatform codebase (Clean Architecture, MVI, Koin, Material 3 design system) that powers both a field-worker app and an admin app on Android and iOS, delivered as coordinated pull requests across backend, mobile and admin web.
- Delivered geofenced clock in / out, shifts and history, photo logs, earnings, leaderboard, worker management, time-review approvals, site and geofence management, and overnight shifts.
- Built real-time worker presence ("Go Online / Offline") with a foreground location service, FCM push handling and server-side auto clock-in that recovers on its own when push messages are delayed or lost.
- Built automatic clock-out when a worker leaves the site, end to end: a backend scheduler, an on-device warning, break-aware rules, and the reason shown in mobile history and the admin website.
- Built worker self-sign-up with admin approval and single-use, hashed invite codes, and cut load times on data-heavy admin screens by running network calls in parallel.

Company web platform: QA for the bilingual (English / Arabic) Folowise website

- Designed and ran test cases for key journeys and lead-generation forms, cross-browser and responsive testing, Arabic RTL checks, defect reporting and regression before each release.

EDUCATION & TRAINING

B.Sc. Computer Science, The World Islamic Sciences and Education University 10/2021 – 08/2025
Grade: Very Good

Flutter Development Internship, Tuned Applications 02/2024 – 05/2024

- Built cross-platform Flutter apps with responsive UI, state management, REST API integration and Clean Architecture.
